

# 1-Day Advanced and Difficult Airway Course Schedule

## Day 1 Morning

### Airway Anatomy and Assessment

- How to assess an airway
- Identification of landmarks
- Predicting a difficult airway
- Special scenarios
- Airway classification and grading

### Indications for Airway Management

- Clinical conditions
- Respiratory status
- Anatomy
- Predictors of airway need
- Common approaches

### Non-Invasive and Invasive Airway Management

- Escalation of intervention
- Sequential oxygenation
- BIPAP
- CPAP
- Endotracheal Intubation
- Airway Adjuncts (LMA, OPA)

### Airway Options and Medications

- Types of airway devices
- Airway equipment
- Laryngoscopes
- Fiberoptic and Video Scopes
- Induction agents and dosing

### Induction and Intubation

- Procedure organization and setup
- Stepwise airway protocols
- Anatomy
- Endotracheal Intubation
- Hands-On Procedure Practice

## Tube Confirmation and Difficult Airway Management

- Confirmatory tests
- Defining an intact airway
- How to manage a failed airway
- Difficult airway algorithm and management
- Fiberoptic laryngoscopy
- Laryngeal mask airway
- Video laryngoscope

### Day 1 Afternoon

## Difficult Airway Algorithm and Simulation

- Application of the difficult airway algorithm
- Simulated patient scenarios
- Intubation with video laryngoscopy
- Hands-On airway procedure lab
- Individual review with instructor
- Certification Examination
